

Pg. 6

Harvesting the Shrimp:

Turn off the air, wait 4-5 minutes, and shrimp and cysts will separate naturally. Shrimp will sink, cyst shells will float to the top.

Turn stopcock valve slowly to drain only the orange baby shrimp into a brine shrimp net. Drain as few of the brown cyst shells into the net as possible. Turn off the flow as soon as the shrimp have drained. Toss remaining water. Never re-use hatch water.

Empty Brine shrimp net into clean aquarium water, and feed them to the fish.

2 qt. Food storage containers with 4 inch sides work great when draining Shrimp.
